FUEL FILL ASSEMBLY AND METHOD OF FORMING SAME

ABSTRACT

There is disclosed a fuel fill assembly and a method of forming the same. The assembly typically includes a first component (e.g., an outer body panel) and a second component (e.g., a wheelhouse) of an article of manufacture such as an automotive vehicle. The assembly also typically include an annular member at least partially between the first and second components and a pair of seal for sealing between the annular member and the first and second components.
